# Language Translation of LIVEARf App

If you want to add two or more languages to your Shopify store **(Setting > Language > Add language)**

Shopify themes have a translator selector option in theme customization, it is located in the header section

The updated LIVEARf App version now gets the Shopify language code (**en—English, it—Italian, fr—French, de—Dutch**). Once your customer changes the language in-store, the created LIVEARf options name has not been translated before. But now we have added a new way to meet that requirement.

Once you want to create an option in the LIVEARf app, we will give the display name (option name) text box as your selected languages

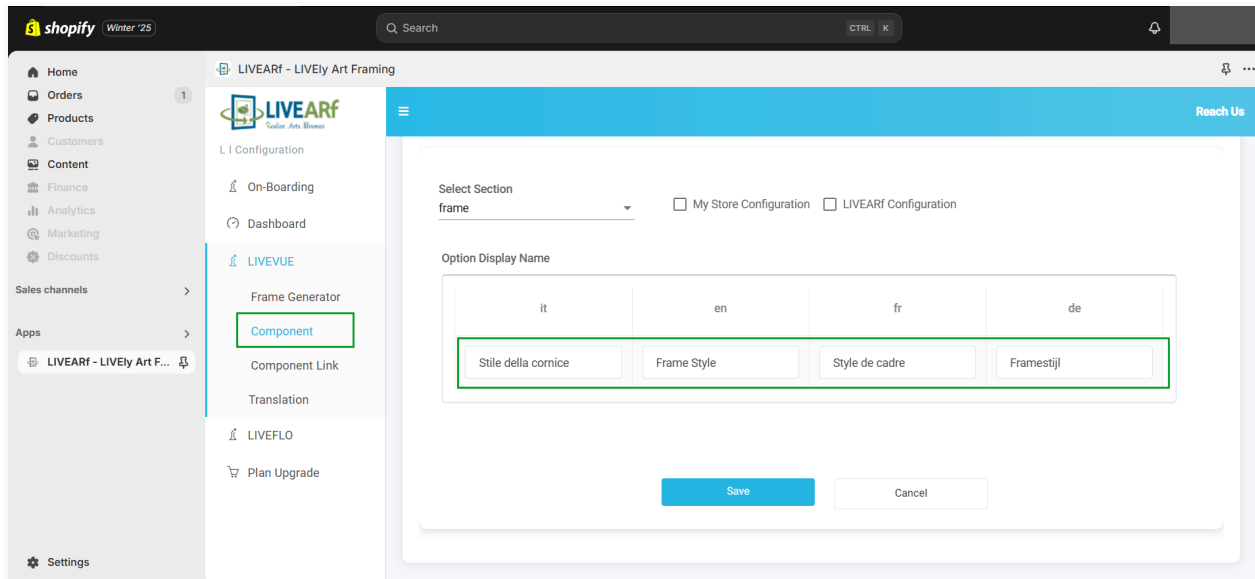

You can type the options' display names in your languages. For example, (now you want to create an option named **Frame Style**). Once you fill out the all text box, you need to save the option.

Frame Style - English

Stile della cornice - Italian

Style de cadre - French

Framestijl - Dutch

Now your customer can see the LIVEARf Option names as their language.
